

Tactical Intelligence & Real-Time Automation for **Survival Gaming**

Empowering 16M+ competitive gamers with zero-latency desktop HUD overlays, Discord companion automation, and edge AI threat prediction.

NVIDIA Inception Candidate

Rust+ Telemetry Ingestion

Tauri + Rust + React Desktop Native

100% Game TOS Compliant

The Brutal Reality of 24/7 Competitive Survival

Hardcore survival titles like Rust operate round-the-clock where a single moment of unawareness obliterates hundreds of hours of team investment.

1. Offline Raiding Blindspots

Players spend 40–80 hours each wipe fortifying complex compounds. Raids happen when teams are asleep or at work. Without immediate, actionable alerts, defense is impossible.

2. Fragmented & Clunky Tools

Official companion mobile apps are disconnected from team communication (Discord), suffer from notification delays, and cannot be accessed inside the game during active combat.

3. Dangerous Illicit Cheats

Desperate for tactical awareness, players often turn to intrusive third-party hacks that tamper with game memory, resulting in instant hardware/VAC bans and security risks.

Key Pain Point: Competitive clans currently manage 4+ disconnected tools, missing critical alarms and losing entire wipe cycles due to lack of synchronized, real-time tactical intelligence.

Raidar: Unified Tactical Intelligence Ecosystem

A legal, high-performance desktop HUD overlay and synchronized Discord companion bot built on official server telemetry.

Live Tactical Map

Real-time tracking of squad positions, monument events, cargo ship trajectories, locked crates, and traveling vendors directly on an in-game HUD overlay.

Instant Base Alarms

Sub-second smart alarm triggers sent simultaneously to in-game screen HUD and Discord mobile push notifications the exact millisecond base defenses trip.

Smart IoT Automation

Programmable conditional logic for smart switches: trigger automated trap circuits, emergency airlock closures, night-lighting, and upkeep monitoring.

Arbitrage & Raid Intel

Real-time vending machine stock intelligence, profit scanner, recycling math, and optimal explosive raid cost calculators for tactical squad decision-making.

100% Anti-Cheat & TOS Compliant: Raidar connects exclusively via the official Rust+ WebSocket protocol. Zero game memory injection, zero file modifications, zero ban risk.

Dual-Surface **Synchronized Engine**

Engineered for competitive players who demand sub-millisecond execution and seamless squad-level synchronization.

Desktop HUD Overlay

Tauri v2 + Rust Core

Ultra-lightweight borderless overlay rendering directly over the active game viewport.

- ✓ **Zero FPS Degradation:** Hardware-accelerated lightweight WebView footprint (<45MB RAM).
- ✓ **Direct Rust+ Token Interception:** Instant pairing without manual credential sharing.
- ✓ **Rich Tactical Toolset:** Cargo ship crate countdowns, SteamID ban scanner & profit matrices.

Companion Discord Bot

Node.js + Appwrite Cloud

24/7 cloud watchtower keeping the entire team in sync, even when PCs are powered off.

- ✓ **Instant Server Provisioning:** Single `/link` command creates automated dedicated channels.
- ✓ **Interactive Device Control:** Flip smart switches and read upkeep directly from Discord buttons.
- ✓ **Granular Whitelisting:** Clan leaders control per-member permissions for security.

Survival & Extraction genre

High Willingness to Pay

Competitive survival clans routinely spend hundreds of dollars monthly on dedicated gaming servers, VIP queue skips, skins, and team management tools. Raidar directly protects that investment.

Universal Genre Expansion

The core architecture of Raidar (real-time telemetry ingestion + synchronized overlay + bot companion) expands naturally into adjacent mega-titles: *ARK: Survival Ascended*, *DayZ*, *Escape from Tarkov*, and *Dune: Awakening*.

Recurring SaaS with Clan-Scale Expansion

A high-conversion freemium funnel feeding sticky, team-wide monthly subscriptions.

SCOUT

\$0

/ month

Solo players getting started

✓ Live tactical map overlay

✓ 1 linked game server

✓ Real-time raid alarms

✓ Discord bot (single channel)

VIRAL ADOPTION ENGINE

RAIDER

MOST POPULAR

\$5

/ month

For active squads & trios

✓ Everything in Scout

✓ Up to 3 linked servers

✓ Smart Switch automation engine

✓ Multi-channel Discord routing

✓ Vending market & profit scanner

CORE REVENUE DRIVER

CLAN

\$12

/ month

For competitive clans & zerg groups

✓ Everything in Raider

✓ Unlimited linked servers

✓ Granular device whitelist controls

✓ Priority real-time event pipeline

✓ VIP clan support & custom webhooks

HIGH LTV CLAN TIERS

\$ **Additional Monetization Channels:** Verified Server Partner promotions, tournament broadcast telemetry licenses, and developer API access for clan automation.

Supercharging Intelligence with NVIDIA Edge AI

Leveraging NVIDIA's cutting-edge AI and low-latency graphics technologies to build the world's first intelligent gaming co-pilot.

1. TensorRT Threat Prediction

Deploying lightweight edge AI models optimized via **NVIDIA TensorRT** to analyze historical raid patterns, acoustic breach signatures, and trigger predictive automated base defenses before core loot is breached.

2. NVIDIA Reflex & Low Latency

Implementing **NVIDIA Reflex SDK** and optimized DirectX/Vulkan presentation pipelines to ensure zero-latency overlay rendering without stealing GPU cycles from high-framerate competitive gaming.

3. Multimodal Tactical Co-Pilot

Utilizing on-device vision models (powered by GeForce RTX Tensor Cores) to parse in-game HUDs, inventory states, and provide real-time synthesized voice callouts to squads during high-stress battles.

NVIDIA Inception Value Add: Access to NVIDIA developer relations, TensorRT optimization toolchains, GPU cloud infrastructure, and joint gaming ecosystem positioning.

Defensible Moat & Market Positioning

How Raidar outperforms legacy mobile apps, standalone bots, and risky illicit alternatives.

Feature / Capability	Raidar Ecosystem	Official Rust+ App	Generic Discord Bots	Illicit Cheats / ESP
100% TOS Compliant (Zero Ban Risk)	✓ 100% Safe	✓ Safe	✓ Safe	✗ Permanent Bans
In-Game Real-Time HUD Overlay	✓ Zero-Latency HUD	✗ Phone Only	✗ None	✓ Yes (Illegal)
Automated Discord Companion Bot	✓ 1-Click Provisioning	✗ None	▲ Manual / Slow	✗ None
Programmable IoT Base Defense	✓ Conditional Triggers	✗ Manual Only	▲ Basic Toggle	✗ None
Market Arbitrage & Raid Calculator	✓ Built-In Intelligence	✗ None	✗ None	✗ None
Multi-Server Clan Permissions	✓ Enterprise Roles	✗ 1 Account Only	▲ Primitive	✗ None

Core Moat: Proprietary low-latency WebSocket routing layer + dual-surface HUD & Discord engine that creates unbreakable team workflow lock-in.

Product Roadmap & Milestones

A focused trajectory from dominant Rust intelligence tool to universal competitive gaming platform.

PHASE 1 • COMPLETED

Foundation & Core HUD

- Tauri native desktop overlay build
- Rust+ token interception & telemetry link
- Live interactive tactical map & world events
- Discord companion bot with automated channel creation
- Vending machine stock scanner & profit calculations

PHASE 2 • IN PROGRESS

Clan Scaling & Defense IoT

- Multi-server clan subscription tiers
- Autonomous Smart Switch condition engine
- Cargo ship crate spawn prediction & deck mapping
- SteamID API ban correlation & hacker detection
- Mobile web dashboard & notification sidecars

PHASE 3 • FUTURE HORIZON

NVIDIA AI & Multi-Game

- TensorRT edge AI predictive raid breach alarms
- Real-time voice tactical co-pilot for squads
- Expansion into ARK: Survival Ascended & Dune
- Tournament broadcast spectator telemetry HUD
- B2B Server Host automated telemetry SDK

🕒 **Current Momentum:** Active production desktop client, live Discord bot servicing competitive clans, and proven viral referral loops.

• JOIN THE MISSION

Building the Future of Competitive Gaming AI

We are pioneering zero-latency tactical telemetry and on-device edge AI to give competitive players and esports squads the ultimate operational advantage.

NVIDIA Partnership

Seeking GPU compute credits, technical mentorship on TensorRT model quantization, and co-marketing via the NVIDIA Inception network.

Accelerated Scaling

Expanding engineering throughput to deploy edge AI threat prediction and onboard top competitive survival clans globally.

Multi-Title Expansion

Standardizing the telemetry and HUD overlay SDK for extraction and survival titles across the entire \$20B+ market.
